Preface

This report was undertaken for the Massachusetts Caucus of Women Legislators' Task Force on Women and Poverty to complement their study, Public Assistance Programs for Poor Women in Massachusetts. In it, the Task Force examined state and federal policies and made recommendations for AFDC, Medicaid, Employment and Training, and Housing. Support for both publications came from the Massachusetts Caucus of Women Legislators and Speaker of the Massachusetts House of Representatives George Keverian. Chancellor Joseph Duffey of the University of Massachusetts provided additional funds to print copies of the report.

The Task Force recogized the need for more detailed information to determine how poverty affects women in different areas of the Commonwealth. They contracted with the Massachusetts Institute for Social and Economic Research (M.I.S.E.R.) at the University of Massachusetts at Amherst for the report because of the Institute's expertise in census data and public policy research.

Many people representing different programs within M.I.S.E.R. contributed to the report. Dr. Lynn Cadwallader, Director of the Academic Resources Program, worked as a liaison with the Task Force to define their needs and coordinate the project. Dr. Patricia Madson, Director of the State Data Center, created and produced the tables and wrote the text. Catherine Lerme prepared the maps, and Ronald Lussier assisted in printing the tables.

The source for these tables was the 1980 Census of Population and Housing, Massachusetts. U.S. Bureau of the Census: Summary Tape Files 1, 2, 3 and 4 (machine-readable data files), 1982-83.

GLOSSARY.. 167

INTRODUCTION

The composition of poverty has changed over the last several decades. Increasingly, female headed families, the children in those families, and older women living alone are being identified as poor. Not only does poverty affect different groups of people unequally, it is also unevenly distributed geographically. This report presents the most detailed information currently available about women and poverty for each of the 351 cities and towns in Massachusetts. Data are organized in a format to enable legislators and policy makers to assess differences among the municipalities in the state.

To put this information into a larger context, we begin with an overview of data on women and poverty in Massachusetts. The overview includes a brief description and summary of major topics included in the report. State figures are compared to statistics for the United States. For some characteristics maps provide a visual display of differences among cities and towns.

Characteristics of all women in the state are presented: number, age, race and Spanish origin, marital status, school enrollment, educational attainment, labor force status, and presence of children.

We also present information about poverty: data are included for all families, families with a female householder (no husband present), for all females by age, and for children under 18 years. The presence or absence of children is displayed for all families below poverty as well as for families with female householders. Labor force status for female family householders above and below poverty is also presented.

Data are from the 1980 U.S. Census of Population and Housing. While changes in poverty levels are updated on a national basis, these are the most recent and detailed figures available for cities and towns. When the 1990 Census figures are released, the tables in this report will provide a basis from which to assess changes in poverty levels and characteristics of women in the Commonwealth.

MASSACHUSETTS WOMEN AND POVERTY:

STATE SUMMARY

I. AGE AND RACE CHARACTERISTICS

There were 3,006,516 females in Massachusetts in 1980, who made up 52.4 percent of the total population. Massachusetts has a slightly higher proportion of females than does the United States, at 51.4 percent. The female share of the population ranges from 46 to 56 percent among the cities and towns in the state. The percentage of the population that is female is displayed for each city and town in the map on page 4.

The age distribution for Massachusetts females shown in Table 14 is slightly different from the age distribution for United States females. Massachusetts women are older, with a median age of 32.6 years compared to 31.2 nationally. Massachusetts has about 2 percent fewer females in the 0-10 year category, and about 2 percent more females in the 65 year and over classification. There are slightly more women in the 18-24 age group (13.3 percent compared to 12.9 percent), which may reflect college and university enrollment. There are approximately 1 percent fewer women in the 25-44 group, and approximately 1 percent more women ages 45-64. Age distribution for females is presented in Table 3.

Females are more likely to be white in Massachusetts than in the U.S. Ninety-four percent are white compared to 83 percent for the country. Only 4 percent are black while 12 percent of the nation's females are black. Figures for American Indian, Eskimo and Aleut, and Asian and Pacific Islander are similar to those of the U.S., approximately 1 percent.

Females of Spanish origin may be of any race. Race and Spanish origin were two separate questions on the census questionnaire; both involved self-identification. For example, someone who identified herself as being of Spanish origin also designated a race category such as black or white. Here too the state proportion of females who are of Spanish origin is smaller than that of the entire country: 2.4 percent compared to 6.3 percent. Race and Spanish origin detail for females are shown in Table 4.

Massachusetts has a smaller share of children under 18 years than the U.S. Approximately 28 percent of the U.S. population is under 18 years while statewide the figure is 26 percent. There is more variation across the state in the proportion of city and town population that is under 18 than there is for the proportion female. Although 26 percent of the state's inhabitants were under 18 years in 1980, the range is from 11 to 36 percent among the 351 municipalities. Total population figures, female population and number of children under 18 are all shown in Table 2.

PROPORTION FEMALE
OF TOTAL POPULATION

1980 CENSUS OF POPULATION AND HOUSING

M.I.S.E.R.

II. EDUCATION:

More Massachusetts women are high school graduates than are their national counterparts: 72 percent compared to 66 percent in the U.S. for women 25 years and older. Possessing a high school diploma becomes less likely with age. While 86 percent of women ages 25-44 are high school graduates, for women 45-64 the figure is 70 percent. Only half of women 65 years and older have completed high school.

The same situation is true with respect to college graduation. Approximately 15 percent of Massachusetts women have completed 4 years of college or more, compared to 13 percent nationally. The percentage of women who have not completed high school can be found in Table 1, while Table 6 presents years of school completed for women 25 years and older by age. A map on page 6 displays the range in percentages of high school graduates among the municipalities in the Commonwealth.

School enrollment for women and children by age categories is presented in Table 5. Not surprisingly, the proportion of women enrolled in school decreases with age. Over 90 percent of women under 18 were enrolled in school, while approximately 40 percent of women age 18 to 24 were enrolled in school. Only 10 percent of females 25 to 34 were students.

Until high school graduation, students in both public and private schools are enumerated by place of family residence. College students are counted at the place where they are attending school; therefore, the figures for school attendance for women 18 years and older may reflect proximity to a college or university. For example, in Amherst, 93 percent of women between the ages of 18 and 24 were attending school. Additional school enrollment data are located in Table 5.

III. MARITAL AND FAMILY RELATIONSHIPS

Over half (54.8 percent) of women 15 years and older in the United States are married, but for Massachusetts women the figure is less than half, or 49.5 percent. Massachusetts women are more likely to be single (29 percent compared to 23 percent nationally) and are less likely to be divorced, 5.9 percent statewide and 7.2 percent for the U.S. The proportion of women who are separated or widowed in the state is approximately equal to figures for the country as a whole. Marital status information is displayed in Table 7.

IV. LABOR FORCE PARTICIPATION

Massachusetts women have a higher labor force participation rate than do their United States counterparts. Almost 53 percent of women 16 years and older in Massachusetts are in the labor force as compared to approximately 50 percent nationally. Labor force participation rates for women by city and town are displayed in the map on page 8; data are located in Table 13.

Classification in the labor force includes women who were employed as well as unemployed. The unemployed category includes persons who did not have a job, were looking for work the four weeks prior to the census, and were available to accept a job.

▨ 84 - 86 (N = 86)
■ 86 - 94 (N = 66)

PROPORTION FEMALE HIGH SCHOOL GRADUATES

1980 CENSUS OF POPULATION AND HOUSING

M.I.S.E.R.

So-called "discouraged workers," who did not have a job and were not actively looking for work during the four weeks before the census, are not considered to be in the labor force. Other persons not in the labor force are students, housewives, retired workers, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work for less than 15 hours a week.

Women in the labor force in Massachusetts are less likely to be unemployed than their national counterparts. The 1980 unemployment rate for women nationally was 6.5 percent compared to 4.6 percent across the state.

The number and proportion of women in the labor force who have children of various ages appear in Table 14. The highest labor force participation rate is for women whose children are either in elementary or secondary school: 66 percent of these women are in the labor force. Almost 40 percent of women who have children under 3 years are in the labor force. For women 16 years and older who have no children, 52 percent are in the labor force.

Of special interest to many policy makers is the relationship between labor force status and poverty status for female family householders with no husband present. There were roughly 225,000 families with a female householder in 1980. Over one-fourth of female headed families were below poverty, and these families constitute over half of all families below poverty. Only 5 percent of poor female family householders worked full-time. Thirty-one percent worked part-time, and almost two-thirds were not in the labor force.

Female family householders who were above poverty were more likely to be in the labor force and were more likely to work full-time. Forty-four percent of female family heads worked full-time and another 22 percent worked part-time. Approximately one-third were not in the labor force.

V. POVERTY CHARACTERISTICS

Poverty status for the 1980 census was determined by comparing 1979 income to an income cutoff or "poverty threshold." Poverty status was calculated for families and unrelated individuals (persons who do not live in families). Total family income is used to determine poverty status of families and, by implication, all family members. Income cutoffs for families vary by family size, number of children, and age of the family householder. For unrelated individuals poverty status is determined by total individual income and age.

Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented in the glossary. As an example, the poverty threshold for a family of four was $7412 in 1979. For a single parent family with one child under 18 the figure was $5000. In comparison, the 1986 poverty threshold for a family of four was $11,200.

Excluded from the income concept used in the determination of poverty is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of services obtained from the ownership of assets (such as owner-occupied housing units); and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed.

PROPORTION FEMALES IN THE LABOR FORCE

1980 CENSUS OF POPULATION AND HOUSING

M.I.S.E.R.

Most striking about the poverty statistics presented is the wide variation--not only is there a wide range geographically, but also according to family and age characteristics. Four tables present statistics about poverty. Data for families below poverty and the presence or absence of children are displayed in Table 9. Poverty information for female family householders with no husband present can be found in Table 10. The age and number of women and children below poverty appear in Table 11. Table 12 shows labor force status for female family householders, no husband present, and whether they were above or below poverty.

The poverty rate for Massachusetts families was 7.6 percent, based on 1979 income. The Suffolk county family poverty rate was twice as high as the state figure (15.8 percent) while Dukes and Nantucket counties had poverty rates about one-half of the state level. The United States as a whole had a family poverty rate of 9.6 percent. On a town-by-town basis the family poverty rate ranges from less than 2 percent for towns such as East Longmeadow and Boxford to over 13 percent for Boston, Chelsea, Fall River, Holyoke, Lawrence, New Bedford, and Springfield.

The map on page 10 shows the proportion of families below poverty for the cities and towns in the state.

Fifty-six percent of the families below poverty in Massachusetts had a female householder, no husband present. This figure is higher than the comparable U.S. figure of 43.8 percent. Hampden and Suffolk counties had the highest proportions of female headed families below poverty. The proportions of all families below poverty that had a female householder with no husband present are shown on page 11.

About 13 percent of all children under 18 years were living below poverty. For females, poverty status differs by age. Women over 75 are the most likely to be below poverty, while women between 40 and 64 years are the least likely. Fourteen percent of all women over 75 are below poverty, while only 6.5 percent of women 40 to 64 years are poor. About one of every eight women between 18 and 39 years is below poverty, while for women 65 to 74 the comparable figure is one of every 10 persons.

Data for women and poverty presented in this report were selected from Summary Tape Files 1, 2, 3, and 4 of the 1980 Census of Population and Housing. There is more subject matter detail available than is presented in this report, for example, tables which display other aspects of poverty. Comparable data are also available for other geographic areas such as SMSA's (Standard Metropolitan Statistical Areas) as well as tracts. For additional information, contact the State Data Center, Massachusetts Institute for Social and Economic Research, 117 Draper Hall, University of Massachusetts, Amherst, MA 01003, telephone (413)545-0176.

ORGANIZATION OF THE REPORT

The fourteen tables which follow contain over 125 separate data items for every city and town in the Commonwealth. The first table contains summary characteristics selected from the other thirteen tables. Each table is preceded by a table description which defines the specific data items in the table. The tables themselves are arranged to facilitate comparison within the state by first giving figures for the state as a whole, 14 counties, and then information for each city and town. A glossary completes the report.

Table 1. SUMMARY CHARACTERISTICS: WOMEN AND POVERTY

Table 1 contains selected summary characteristics for women, children, and families below poverty. More subject detail and counts as well as percentages are found in following tables. For definitions of terms, see the Glossary.

FAMILIES BELOW POVERTY: The percent of all families that are below poverty. See Table 9.

PERCENT HEADED BY FEMALES: The percent of families below poverty that have a female householder, no husband present. See Table 10.

CHILDREN UNDER 18 YEARS BELOW POVERTY: The percent of all children in families ages 0 - 17 that are below poverty. See Table 11.

FEMALES IN THE LABOR FORCE: The percent of females 16 years and older that are in the labor force (in the armed forces, civilian labor force: employed, and unemployed but looking for work). See Table 13.

EDUCATION LESS THAN HIGH SCHOOL: The percent of females 25 years and older who are not high school graduates. See Table 5.

Table 3. AGE DISTRIBUTION FOR FEMALES

AGE: Age at last birthday, i.e., number of completed years from birth to April 1, 1980, based on replies to a question on month and year of birth.

AGE 10 - 17: The number of females ages 10 through 17 years. The percentage of all females who are ages 10 through 17 years.

AGE 18 - 24: The number of females ages 18 through 24 years. The percentage of all females who are ages 10 through 17 years.

AGE 25 - 44: The number of females ages 25 through 44 years. The percentage of all females who are ages 25 through 44 years.

AGE 45 - 64: The number of females ages 45 through 64 years. The percentage of all females who are ages 45 through 64 years.

AGE 65+: The number of females age 65 or older. The percentage of all females who are age 65 or older

AGE 0 - 16: The percentage of females who are age 0 through 16 years can be derived by adding the percentages in all the other age categories and subtracting from 100 percent.

TABLE 4. RACE AND SPANISH ORIGIN FOR FEMALES

RACE: All persons were asked to identify themselves according to the following race categories on the 1980 census questionnaire: White, Black or Negro, American Indian, Eskimo, Aleut, Japanese, Chinese, Filipino, Korean, Asian Indian, Wietnamese, Hawaiian, Guamanian, Samoan, and Other. The "Other" category includes Malayan, Polynesian, Thai, and other groups not included in these specific categories on the questionnaire.

SPANISH ORIGIN: All persons were asked to identify themselves whether they were of Spanish origin or descent. Spanish origin is an indication of ethnicity, not race, and persons of Spanish origin may be of any race.

WHITE FEMALES: The number of females who identified their race as White, and the percent of the total female population who are White.

BLACK FEMALES: The number of females who identified their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories, but reported entires such as Black Puerto Rican, Haitian, Jamaican, Nigerian, or West Indian, and the percent of the total female population who were Black.

AM.IND./ESK. FEMALES: The number of females who identified their race as American Indian, Eskimo, or Aleut, and the percent of the total female population who were American Indian, Eskimo and Aleut.

ASIAN FEMALES: The number of females who identified their race as Japanese, Chinese, Filipino, Korean, Asian Indian, Vietnamese, Hawaiian, Guamanian, Samoan, and Other Asian and Pacific Islander responses, and the percent of the total female population who were Asian and Pacific Islanders.

FEMALES OF OTHER RACES: Although not listed separately, the proportion of females in the "Other" race category can be calculated by adding the percentages in each of the four race categories shown (White, Black, American Indian/Eskimo and Aleut, Asian and Pacific Islander) and subtracting that figure from one hundred percent.

SPANISH ORIGIN FEMALES: The number and percent of females who identified themselves as being of Spanish origin. Since females of Spanish origin can be of any race, the number and percent Hispanic cannot be added or combined with race counts or percentages.

TABLE 5. SCHOOL ENROLLMENT FOR WOMEN AND CHILDREN BY AGE

SCHOOL ENROLLMENT: Persons 3 years old and over were classified as enrolled in school if they attended regular school or college at any time since February 1, 1980. The 1980 Census was taken on April 1, 1980.

CHILDREN 3+ IN NURSERY SCHOOL: Persons three years and over enrolled in nursery school.

WOMEN 3-18 ENROLLED IN SCHOOL: The number of women enrolled in school ages 3 years through and including 17 years. The percentage of females ages 3-17 who are enrolled in school.

WOMEN 18-24 IN SCHOOL: The number of women enrolled in school ages 18 years through and including 24 years. The percentage of females ages 18-24 who are enrolled in school

WOMEN 25-34 IN SCHOOL: The number of women enrolled in school ages 25 years through and including 34 years. The percentage of females ages 25-34 who are enrolled in school.

WOMEN 35+ IN SCHOOL: The number of women enrolled in school age 35 years and older. The percentage of females age 35 and older who are enrolled in school.

TABLE 6. YEARS OF SCHOOL COMPLETED FOR WOMEN BY AGE

YEARS OF SCHOOL COMPLETED: Years of school completed for women 25 years of age and older. Data on years of school completed are derived from two questions, one identifying the highest grade attended in regular school, the second determining whether the respondent finished the grade specified. Those persons who passed a high school equivalency examination (such as GED) were classified as high school graduates. Schooling received in foreign schools was to be reported as the equivalent grade or year in the regular American school system.

The number tabulated in each category of years of school completed includes (a) persons who reported that they had attended the indicated grade and had finished it, (b) those who had attended but did not complete the next higher grade, and (c) those still attending the next higher grade. Tabulations include persons in school as well as those who have completed their schooling.

NOT HIGH SCHOOL GRADUATE: The number of women ages 25-44, 45-64, and 65 years and older who have completed less than four years of high school. The percentage of women in each age category who have completed less than four years of high school.

HIGH SCHOOL GRADUATE: The number of women ages 25-44, 45-64, and 65 years and older who are high school graduates (see Years of School Completed above) and have not completed any additional years of school. The percentage of women in each age category who are high school graduates and have not completed additional years of school.

1-3 YEARS COLLEGE: The number of women ages 25-44, 45-64, and 65 years and older who have completed 1-3 years of college but have not completed any additional years. The percentage of women in each age category who have completed 1-3 years of college but no additional years.

COLLEGE GRADUATE: The number of women ages 25-44, 45-64, and 65 years and older who have completed 4 years of college or more. The percentage of women in each age category who have completed 4 years of college or more.

TOTAL NUMBER OF HIGH SCHOOL GRADUATES: To obtain a count of all high school graduates (including those who have completed high school and beyond) the categories "High School Graduate," "1-3 Years College" and "College Graduate" are to be added together. To obtain the percentage who are high school graduates, these same percentages can be added together, or the percentage "Not High School Graduate" can be subtracted from one hundred percent.

TABLE 7. MARITAL STATUS FOR WOMEN 15 YEARS AND OLDER

MARITAL STATUS: All persons were asked whether they were "now married," "widowed," "divorced," "separated," or "never married." Marital status data were tabulated only for persons 15 years old and older. Couples who lived together (unmarried persons, persons in common-law marriages, etc.) were allowed to report the marital status they considered the most appropriate.

SINGLE: Women who have never been married, including those whose only marriage was annulled. The percentage of all women 15 years and older who are single.

MARRIED: Women whose current marriage has not ended through widowhood, divorce, or separation (regardless of previous marital history). The category may also include couples who live together or persons in common-law marriages if they consider this category the most appropriate. The percentage of all women 15 years and older who are married.

SEPARATED: Women legally separated or otherwise absent from their spouse because of marital discord. Included are women who have been deserted or who have parted because they no longer want to live together but who have not obtained a divorce. Separated includes persons with a limited divorce. The percentage of all women 15 years and older who are separated.

WIDOWED: Widows who have not remarried. The percentage of all women 15 years and older who are widowed.

DIVORCED: Women who are legally divorced and who have not remarried. The percentage of all women 15 years and older who are divorced.

Table 8. FEMALE HEAD FAMILIES WITH OR WITHOUT CHILDREN

HOUSEHOLD: The person or persons occupying a housing unit.

HOUSEHOLDER: The person in whose name the home was owned or rented. If there was no such person, any adult household member at least 15 years old who was not a roomer, boarder, or paid employee. This classification was revised from 1970 to replace the "head-of-household" category.

FAMILY HOUSEHOLDER: A householder living with one or more persons related to him or her by birth, marriage, or adoption.

NONFAMILY HOUSEHOLDER: A householder living along or only with persons not related to him or her.

FAMILY: A family consists of two or more persons, including the householder, who are related by birth, marriage, or adoption, and who live together as one household; all such persons are considered as members of one family. A family may be classified as a married couple family; a family with male householder, no wife present; or a family with female householder, no husband present.

CHILD/CHILDREN: A son, daughter, stepchild, or adopted child of the householder, regardless of the child'd age or marital status. The category excludes sons-in law, daughters-in-law, and foster children.

FAMILIES, FEMALE HEAD: The number of families who have a female householder, no husband present. The percentage of all families who have a female family householder, no husband present.

FEMALE HEADED FAMILIES WITH CHILDREN: The number of families with a female householder, no husband present, who have children. The percentage of all female headed families who do have children.

FEMALE HEADED FAMILIES WITHOUT CHILDREN: The number of families with a female householder, no husband present, who do not have children. However, in order to be classified as a family, the female householder must be living with someone related to her, such as a sister, brother, mother, father, but not child or spouse. The percentage of female headed families who do not have children.

CHILDREN IN FAMILIES: Own children in families. An "Own child of householder" is a never-married child under 18 years of age who is a son, daughter, stepchild, or adopted child of the householder.

IN FAMILIES WITH FEMALE HEAD: The number of own children who are in families with a female householder, no husband present. The percentage of all own children who are in families with a female householder, no husband present.

Table 9. FAMILIES BELOW POVERTY BY PRESENCE AND AGE OF CHILDREN

POVERTY STATUS IN 1979: Families and unrelated individuals (persons not in families) were classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." Income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families and, by implication, for all family members.

Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented in the glossary. As an example, the poverty threshold for a family of four with two related children under 18 was $7,356 in 1979. Excluded from the income concept used in the determination of poverty is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed.

FAMILIES BELOW POVERTY: The number of families determined be below poverty based on family income in 1979. The percentage of all families who were below poverty in 1979.

WITH CHILDREN 0-6 AND 6-17. The number of families below poverty with children under 6 years of age and with children between the ages of 6-17 years of age. The percentage of all families below poverty who have children in both of these age groups.

WITH CHILDREN 0-6 ONLY: The number of families below poverty with children under 6 years of age only, none older. The percentage of all families below poverty who have children less than 6 years only.

WITH CHILDREN 6-17 ONLY: The number of families below poverty with children between the ages of 6-17 years only, none younger. The percentage of all families below poverty who have children between 6-17 years of age only.

WITHOUT CHILDREN: The number of families below poverty with no children, for example, married couples with no children. The percentage of all families below poverty without children.

Table 10. FEMALE HEADED FAMILIES BELOW POVERTY WITH OR WITHOUT CHILDREN

POVERTY STATUS IN 1979: Families and unrelated individuals (persons not in families) were classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." Income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families and, by implication, for all family members.

Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented in the Glossary. As an example, the poverty threshold for a one parent family of three with two related children under 18 was $5,844 in 1979. Excluded from the income concept used in the determination of poverty is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed.

FAMILIES WITH FEMALE HOUSEHOLDER, NO HUSBAND PRESENT: The following table shows information for female headed families. Families are categorized as married couple families, families with male householder, no wife present, and families with female head, no husband present. For poverty characteristics of all families, see Table 8.

FAMILIES, FEMALE HEAD: The number of families with a female householder, no husband present, that are below poverty. The percentage of all families below poverty that have a female head.

WITH CHILDREN 0-6 AND 6-17: The number of families below poverty with a female householder, no husband present, with children under 6 years of age and with children between 6-17 years. The percentage of all female headed families below poverty that have children in both of these age groups.

WITH CHILDREN 0-6 ONLY: The number of families below poverty with a female householder, no husband present, with children under 6 years of age only, none older. The percentage of all female headed families below poverty that have children less than 6 years only.

WITH CHILDREN 6-17 ONLY: The number of families below poverty with a female householder, no husband present, with children between the ages of 6-17 only, none younger. The percentage of all female headed families below poverty that have children between 6-17 years of age only.

WITHOUT CHILDREN: The number of families below poverty with a female householder, no husband present, with no children; for example, a sister and a brother who live together. The percentage of all female headed families below poverty that have no children.

Table 10. FEMALE HEADED FAMILIES BELOW POVERTY BY PRESENCE AND AGE OF CHILDREN

Table 11. WOMEN AND CHILDREN BELOW POVERTY BY AGE

POVERTY STATUS IN 1979: Poverty status is calculated for individuals as well as for families and households. Families and unrelated individuals are classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." The income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families (and by implication, all family members).

Poverty status is also determined for persons not in families, except for inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 15 years old.

The poverty status of a person who is a family member if determined by the family income and its relationship to the appropriate poverty threshold for that family. The poverty status of an unrelated individual is determined by his or her own income and age in relation to the appropriate poverty threshold. Thus, two unrelated individuals living together may not have the same poverty status.

The following table shows poverty status for all persons for whom poverty status is determined, including both persons living in families and unrelated individuals.

CHILDREN 0-17: The number of children ages 0-17 below poverty. The percentage of all children in that age group who are below poverty.

FEMALES 18-39: The number of females ages 18-39 below poverty. The percentage of all females in that age group who are below poverty.

FEMALES 40-64: The number of females ages 40-64 below poverty. The percentage of all females in that age group who are below poverty.

FEMALES 65-74: The number of females ages 65-74 below poverty. The percentage of all females in that age group who are below poverty.-

FEMALES 75+: The number of females age 75 and over below poverty. The percentage of all females in that age group who are below poverty.

Table 12. FEMALE HEADED FAMILIES BY POVERTY AND LABOR FORCE STATUS

POVERTY STATUS IN 1979: Families and unrelated individuals (persons not in families) were classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." Income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families and, by implication, for all family members.

Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented in the glossary. As an example, the poverty threshold for a single parent family of three with two related children under 18 was $5,844 in 1979. Excluded from the income concept used in the determination of poverty is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed.

FEMALE FAMILY HOUSEHOLDER, NO HUSBAND PRESENT: Families are categorized in three ways: married couple families, families with male householder, no wife present, and families with female householder, no husband present.

LABOR FORCE STATUS IN 1979: A series of items on the 1980 census questionnaire identified persons who worked in 1979 by the number of weeks worked and the number of hours usually worked per week. These data were collected for persons 16 years old and over.

WORKED FULLTIME: Worked 40 to 52 weeks and usually worked 35 or more hours per week in 1979.

WORKED PARTTIME: Worked less than 40 weeks or usually worked less than 35 hours per week.

ABOVE POVERTY, WORKED FULLTIME: Female family householders, no husband present, above poverty who worked fulltime in 1979. Percentage of all female family householders above poverty who worked fulltime in 1979.

ABOVE POVERTY, WORKED PARTTIME: Female family householders, no husband present, above poverty who worked parttime in 1979. Percentage of all female family householders above poverty who worked parttime in 1979.

ABOVE POVERTY, DID NOT WORK IN 1979: The percent of female family householders, no husband present, above poverty who did not work in 1979 can be derived by adding the percentages for above poverty fulltime and parttime employment and subtracting from one hundred percent.

BELOW POVERTY, WORKED FULLTIME: Female family householders, no husband present, below poverty who worked fulltime in 1979. Percentage of all female family householders below poverty who worked fulltime in 1979.

BELOW POVERTY, WORKED FULLTIME: Female family householders, no husband present, below poverty who worked parttime in 1979. Percentage of all female family householders below poverty who worked parttime in 1979.

BELOW POVERTY, DID NOT WORK IN 1979: The percent of female family householders, no husband present, below poverty who did not work in 1979 can be derived by adding the percentages for below poverty full time and parttime employment and subtracting from one hundred percent.

Table 13. LABOR FORCE STATUS FOR WOMEN 16 YEARS AND OLDER

LABOR FORCE STATUS: Persons 16 years old and over were classified as to their status in the labor force based on replies to several questions relating to work activity and status during the reference week. Data on labor force status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for labor force data is not entirely uniform. For many persons, the reference week for answering the 1980 census employment questions was the last week in March, 1980. Labor force status classifications are:

- In the Labor force:
  - Armed Forces
  - Civilian labor force:
    - Employed
    - Unemployed
- Not in the labor force

LABOR FORCE: Members of the Armed Forces and the civilian labor force as defined below.

ARMED FORCES: Persons 16 years old and over on active duty in the Army, Air Force, Navy, Marine Corps and Coast Guard. Members of the merchant marine and civilian employees of the Department of Defense are not members of the Armed Forces. Service in a National Guard or reserve unit for short periods of active duty for training does not count as active duty in the Armed Forces.

CIVILIAN LABOR FORCE: Employed and unemployed civilians.

CIVILIAN LABOR FORCE, EMPLOYED: Civilians 16 years old and over who were either (a) "at work"--those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b)"with a job but not at work"--those who did not work during the reference week but had jobs or businesses from which they were temporairly absent due to illness, bad weather, industrial disputes, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

CIVILIAN LABOR FORCE, UNEMPLOYED: Civilians 16 years old and over who were neither "at work" nor "with a job, but not at work" and who were: (a) looking for work during the last 4 weeks, and (b) available to accept a job. Examples of jobseeking activities are registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, and being on a union or professional register. Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

NOT IN LABOR FORCE: Persons 16 years old and over who are not classified as members of the labor force. This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (fewer than 15 hours during the reference week). Also included are so called "discouraged workers" who do not have a job and have not been actively looking for work during the last four weeks.

NOT IN LABOR FORCE: The number of women 16 years and older not in the labor force. Percentage of all women 16 years and older who are not in the labor force.

TOTAL IN LABOR FORCE: The number of women 16 years and older in the labor force (employed, unemployed and in the Armed Forces). Percentage of all women 16 years and older who are in the labor force.

LABOR FORCE STATUS, EMPLOYED: The number of women 16 years and older in the labor force who are employed. Percentage of women in the labor force who are employed.

LABOR FORCE STATUS, UNEMPLOYED: The number of women 16 years and older in the labor force who are unemployed. Percentage of women in the labor force who are unemployed.

LABOR FORCE STATUS, ARMED FORCES: The number of women 16 years and older in the labor force who are in the Armed Forces. Percentage of women in the labor force who are in the Armed Forces.

Table 14. LABOR FORCE STATUS FOR WOMEN WITH OR WITHOUT CHILDREN

LABOR FORCE STATUS: Persons 16 years old and over were classified as to their status in the labor force based on replies to several questions relating to work activity and status during the reference week. Data on labor force status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for labor force data is not entirely uniform. For many persons, the reference week for answering the 1980 census employment questions was the last week in March, 1980. Labor force status classifications are:

- In the Labor force:
  - Armed Forces
  - Civilian labor force:
    - Employed
    - Unemployed
- Not in the labor force

LABOR FORCE: Members of the Armed Forces and the civilian labor force as defined below.

ARMED FORCES: Persons 16 years old and over on active duty in the Army, Air Force, Navy, Marine Corps and Coast Guard. Members of the merchant marine and civilian employees of the Department of Defense are not members of the Armed Forces. Service in a National Guard or reserve unit for short periods of active duty for training does not count as active duty in the Armed Forces.

CIVILIAN LABOR FORCE: Employed and unemployed civilians.

CIVILIAN LABOR FORCE, EMPLOYED: Civilians 16 years old and over who were either (a) "at work"--those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b)"with a job but not at work"--those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial disputes, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

CIVILIAN LABOR FORCE, UNEMPLOYED: Civilians 16 years old and over who were neither "at work" nor "with a job, but not at work" and who were: (a) looking for work during the last 4 weeks, and (b) available to accept a job. Examples of jobseeking activities are registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, and being on a union or professional register. Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

NOT IN LABOR FORCE: Persons 16 years old and over who are not classified as members of the labor force. This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (fewer than 15 hours during the reference week). Also included are so called "discouraged workers" who do not have a job and have not been actively looking for work during the last four weeks.

IN LABOR FORCE, CHILDREN UNDER 3 YEARS: The number of women who are in the labor force (in the Armed Forces; employed or unemployed) who have children under 3 years. Percentage of women who have children under 3 years who are in the labor force.

IN LABOR FORCE, CHILDREN 3-5 YEARS ONLY: The number of women who are in the labor force (in the Armed Forces; employed or unemployed) who have children between 3-5 years only. Percentage of women who have children between 3-5 years only who are in the labor force.

IN LABOR FORCE, CHILDREN 6-17 YEARS ONLY: The number of women who are in the labor force (in the Armed Forces; employed or unemployed) who have children between 6-17 years only. Percentage of women who have children between 6-17 years only who are in the labor force.

IN LABOR FORCE, NO CHILDREN: The number of women who are in the labor force (in the Armed Forces; employed or unemployed) who have no children. Percentage of women who have no children who are in the labor force.

TOTAL IN LABOR FORCE: The number of women who are in the labor force (in the Armed Forces; employed or unemployed). Percentage of women 16 years and over who are in the labor force.

GLOSSARY

CONSIDERATIONS IN INTERPRETING CENSUS DATA

Complete Count and Sample Data

The basic unit of analysis in the census is the housing unit, or "usual place of residence." In the 1980 census every occupied housing unit (synonomous with "household") received one of two types of questionnaire: the short form or the long form. Basic population and housing questions, called "complete count data," appeared on both the short and long forms of the census questionnaire, and were asked about each household member in every household or occupied housing unit. Complete count population questions include such items as name, household relationship, sex, race, Spanish origin, age and marital status, as well as coverage questions to ensure that no one associated with the household was overlooked. Complete count housing items include number of living units at address, access to unit, complete plumbing facilities, number of rooms, tenure, condominium status, value, contract rent, vacancy status, and standard coverage questions.

A sample of approximately 19 percent of all households in the nation received the long form questionnaire. The percentage of households receiving the long form was determined by the size of the locale. One out of every two households, or a 50 percent sample, received the long form in local jurisdictions eligible for federal revenue sharing funds (towns in Massachusetts) that had fewer than 2,500 people as estimated by the Census Bureau for July 1, 1977. The 50 percent sampling rate was used in areas comprising approximately one-tenth of the nation's population. A one-in-six, or 17 percent, sampling rate was used in all larger areas in the country. In combination, the two sampling rates produce a national sampling rate of approximately 19 percent.

The sample, or long form, questionnaire included additional questions on twenty-six population and twenty housing items, such as education, ancestry, employment, industry and occupation, income, units in structure, heating and fuels used, vehicles and transportation, etc. The sample tabulations were weighted to give estimates of data results for the entire population.

Data from the 1980 census are released to the public by the Census Bureau in a number of ways: publications, microfiche, and computer tapes, called "Summary Tape Files." Summary Tape Files, released to state data centers long before publication and microfiche, also contain a much greater level of detail for local areas. Summary Tape Files 1 and 2 contain complete count data; Summary Tape Files 3 and 4 contain sample data. The fourteen tables in this publication include data from Summary Tape Files 1, 2, 3 and 4.

Both sample and complete count data are subject to several types of error. It is important when using the data to understand the possible sources and types of error. Errors can be classified in two ways: non-sampling and sampling errors. (Note: Non-sampling errors, though they are not related to the sampling process, do affect both complete count and sample data.)

Non-sampling Error

Undercount. The failure to count every person in the census is the error that concerns most people. Evidence suggests that the 1980 undercount is substantially below that of previous censuses. The undercount rate for 1950 was 3.3 percent, in 1960 it was 2.6 percent, and in 1970, 2.3 percent. Undercounting would be of less concern if it occurred randomly among population groups and geographic areas. However, studies of previous censuses indicate that undercount figures are higher for the South than for the North, for men than for women, for Blacks than for Whites, for Hispanics than for non-Hispanics, for rural than for urban areas, and for the poor than for the affluent.

Preliminary estimates of census coverage for 1980, however, suggest a net overcount: more persons were counted than expected. Although actual overcounts may occur for a number of reasons, including machine duplication and respondent error, the estimated national net overcount of 5.5 million for 1980 is thought in large part to be a result of better collection procedures as well as enumeration of illegal aliens.

Respondent Errors. Another source of error is that of misreporting; respondents misinterpret questions or give inaccurate answers. Misreporting of age is an example. A few people report that they are younger than they really are, but over-reporting of age is much more prevalent. Many persons report that they are 65 to 69 years of age when they are really under 65. People tend to overestimate their ages to socially significant milestones, such as 65 or 100. There is also a fairly universal tendency for people to report their ages in years ending in zero or five.

Allocation. When a respondent fails to complete every item on a census questionnaire or enters an inconsistent response, missing or obviously incorrect characteristics are corrected by computerized allocation. The general procedure is to assign an entry for a person or housing unit consistent with entries for persons or housing units with other similar characteristics. When the age of a person was not reported or the entry was obviously incorrect (such as head of household reported as 8 years old), the age assigned to the person was that stored for the last person counted who had an otherwise similar set of specified characteristics.

Substitution. Substitution is the assignment of a complete set of characteristics for a person or housing unit. When a housing unit was determined to be occupied but the questionnaire contained no information for all or some of the occupants, a previously processed household was selected as a substitute, and the full set of characteristics for the housing unit and each person in it was used instead. Occasionally, persons or housing units are substituted in the case of damaged questionnaires or machine processing failure.

Sampling Error

Sampling Variability. As previously noted, the long form census questionnaire was distributed to an average of one in six households. The sample questionnaires are weighted to give data estimates for the entire population of each geographic area. Numbers derived from the sample questionnaires are thus estimates of what a complete count would have shown. Data estimated from a sample will usually be a little different from an actual corresponding complete count. Because sample data are only estimates the data contain errors due to chance, or what is called "sampling error." If various samples were selected using the same method, many different estimates of the 100 percent count would be obtained. That is, if many census samples were taken nationwide on April 1, 1980, using the same sampling method, they would all yield somewhat different results.

Errors caused by chance tend, in the long run, to occur in a particular pattern. A statistic called the "standard error" enables the user to determine how variable the estimates are. The size of the estimated standard error will depend on the size of the estimated number, the size of the sample, the subject matter involved as it is affected by the sample selection procedures, and the estimation process. By calculating the probabilities of chance or random error, it is possible to determine a range called a "confidence interval," with a known probability of including the value estimated. Thus it is possible to calculate, for example, that a hypothetical sample estimate of 34 persons would have a 95 percent chance of falling within a range of 31 to 35 persons.

Suppression

The Census Bureau suppresses, or withholds, certain data in order to maintain the confidentiality required by law. Some basic counts are never suppressed: total population, total housing units, year-round housing units, occupied housing units, vacant year-round housing units, and counts of persons and households in each race and Spanish origin category. Population and housing characteristics may be suppressed when they are cross-classified by race or Spanish origin and another characteristic, such as age. Other data (such as income or value of home) are withheld when the number of persons or households is small enough that individuals might be identified. Data are also suppressed through complementary (additional) suppression when a number below a certain threshold could be derived by subtraction. For complete count data the suppression threshold is 15 person or 5 housing units; for sample data the corresponding thresholds are 30 persons or 10 households.

Suppressed data from the census Summary Tape Files (from which the tables in this publication were produced) appear on the computer tapes as zeroes, marked by special suppression flags. A zero in a table in this report may therefore be an actual value of zero, or a zero that indicates a suppressed value. In most cases, suppressed data values are small, although a large population may be affected by complementary suppression. The biggest inconvenience of suppression is that it results in a downward bias when data are reaggregated into new totals.

Suppression occurs when race is cross-classified by age or sex if there are fewer than 15 persons in any one race group. For example, if there are fewer than 15 Blacks in a city or town, zeroes would appear in a sex by race classification (primary suppression) and there would be zeroes in the sex classification of another race category as well to prevent the derivation of the count of Blacks by subtraction (complementary suppression).

Suppression is most noticeable in Table 3 of this report, "Race and Spanish Origin for Females." The town of Adams had a total population in 1980 of 10381, including 5503 females. While 10357 were White, only 1 person was Black, 10 were American Indian, Eskimo or Aleut, 7 were Asian and Pacific Islander, and 6 were classified as "Other." Since these race totals are each less than 15, when race is cross-classified by sex as it is in Table 3, the non-white race totals are zeroes (primary suppression) and the white female total is zero (complementary suppression).

POVERTY STATUS IN 1979

Families and unrelated individuals are classified as above or below poverty by comparing their total 1979 income to an income cutoff or "poverty threshold." The income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families (and, by implication, all family members). Poverty status is also determined for persons not in families, except for inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 15 years old. Poverty status is derived on a sample basis.

The 1980 census definition of poverty reflects revisions recommended by a Federal interagency committee in 1979 to a definition adopted in 1969. The index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented below. As an example, the poverty threshold for a family of four with two related children under 18 can be found in the chart below to be $7,356 in 1979.

Poverty thresholds are computed on a national basis only. No attempt has been made to adjust these thresholds for regional, state, or other local variations in the cost of living.

The poverty status of a person who is a family member is determined by the family income and its relationship to the appropriate poverty threshold for that family. The poverty status of an unrelated individual is determined by his or her own income in relation to the appropriate poverty threshold. Thus, two unrelated individuals living together may not have the same poverty status.

Households below the poverty level are defined as households in which the total income of the family or the householder of a nonfamily household is below the poverty level. The incomes of persons in the household other than members of the family or other than the householder in a nonfamily household are not taken into account when determining poverty status of a household.

Because the poverty levels currently in use by the Federal Government do not meet all the needs of analysts of the data, variations of the poverty definition are available in terms of various multiples of the official poverty levels. The one most frequently tabulated is 125 percent of the poverty level, where a family or person may have up to 25 percent more income than normally allowed under the poverty threshold appropriate for the family size, etc.

Below poverty level ("poor"). Families or persons whose total family income or unrelated individual income in 1979 was less than the poverty threshold specified for the applicable family size, age of householder, and number of related children under 18 present. In certain tabulations, this group is further subdivided into those with income "below 75 percent of poverty level" and "between 75 and 99 percent of poverty level."

Above poverty level ("nonpoor"). Families or person whose total family income or unrelated individual income in 1979 was equal to or greater than the poverty threshold specified for the applicable family size, etc. In certain tabulations, this group is further subdivided into those with income "between 100 and 124 percent of poverty level," "between 125 and 149 percent of poverty level," "between 150 and 174 percent of poverty level," "between 175 and 199 percent of poverty level," and "200 percent of poverty level and above."

Limitations: The term "poverty" connotes a complex set of economic, social and psychological conditions. The standard statistical definition provides only estimates of economic poverty based on the receipt of money income before taxes. Excluded from the income concept is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed. A comprehensive review of the current poverty definition and its limitations can be found in The Measure of Poverty, U.S. Department of Health, Education, and Welfare, April, 1976.

Figure 2. Poverty Level Thresholds in 1979 by Size of Family and Number of Related Children Under 18 Years Old

Size of family unit	Weighted average thresholds	Related children under 18 years								
		None	1	2	3	4	5	6	7	8 or more
1 person (unrelated individual)	$ 3,686									
under 65 years	3,774	$ 3,774								
65 years and over	3,479	3,479								
2 persons	4,723									
householder under 65 years	4,876	4,858	$ 5,000							
householder 65 years and over	4,389	4,385	4,981							
3 persons	5,787	5,674	5,839	$ 5,844						
4 persons	7,412	7,482	7,605	7,356	$ 7,382					
5 persons	8,776	9,023	9,154	8,874	8,657	$ 8,525				
6 persons	9,915	10,378	10,419	10,205	9,999	9,693	$ 9,512			
7 persons	11,237	11,941	12,016	11,759	11,580	11,246	10,857	$10,429		
8 persons	12,484	13,356	13,473	13,231	13,018	12,717	12,334	11,936	$11,835	
9 or more persons	14,812	16,066	16,144	15,929	15,749	15,453	15,046	14,677	14,586	$14,024
